

Use Case 1: Management of Restaurant Meal Menus

This is the use case for the restaurant owner to add, edit, and remove the meals from its menu.

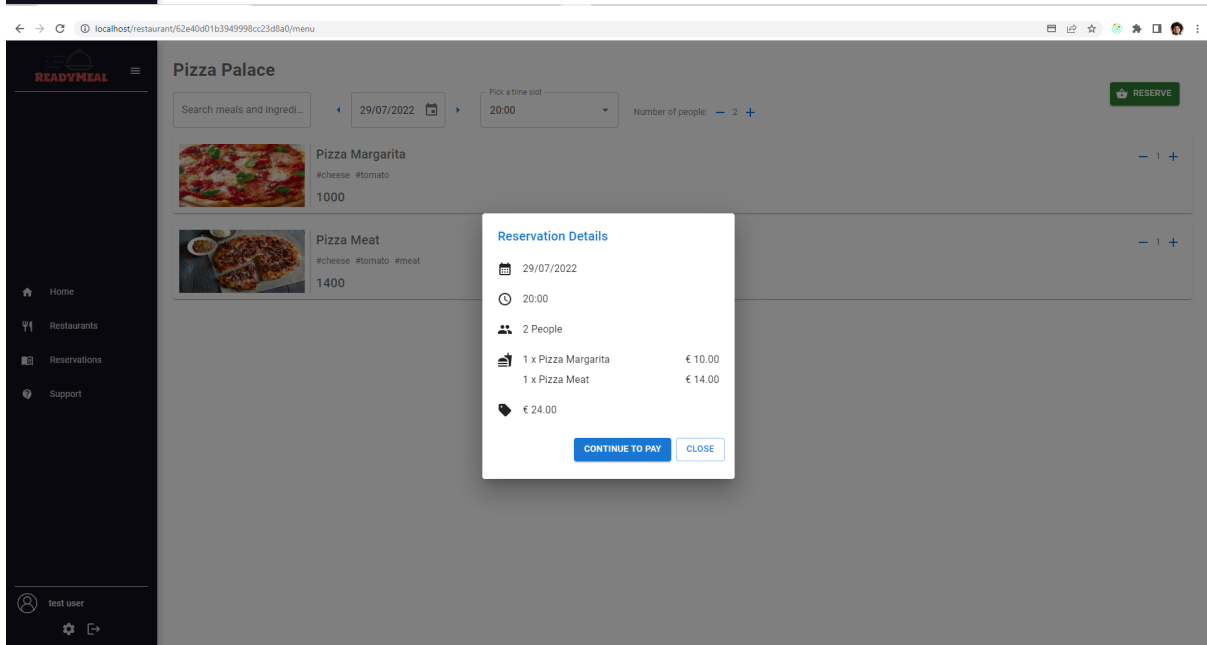

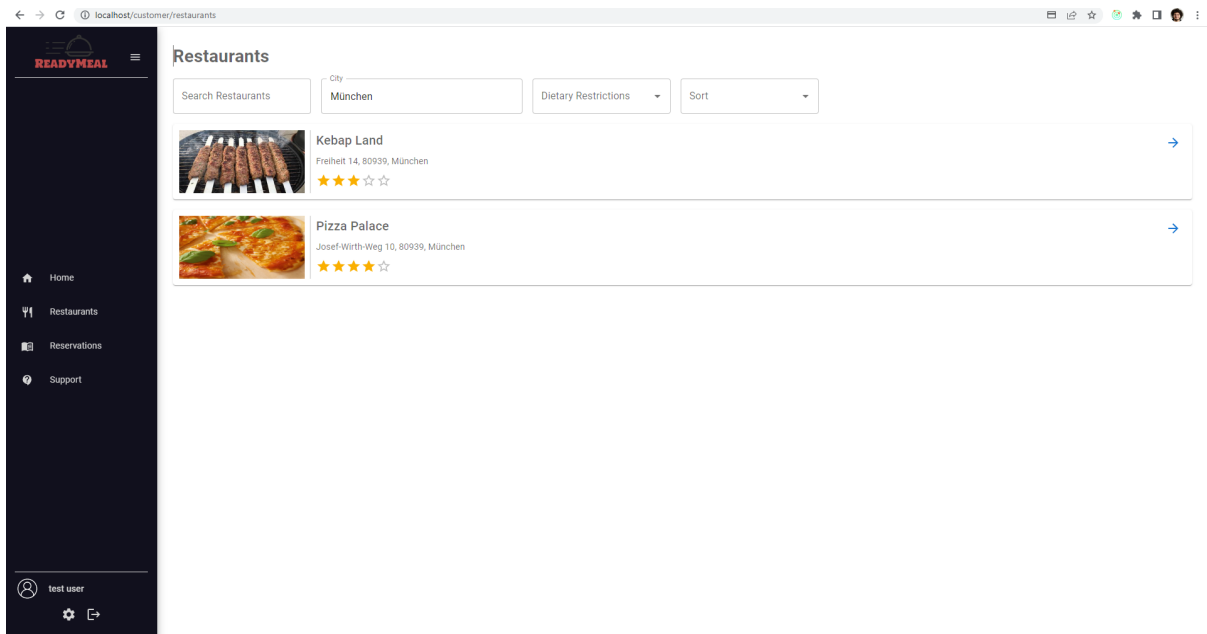

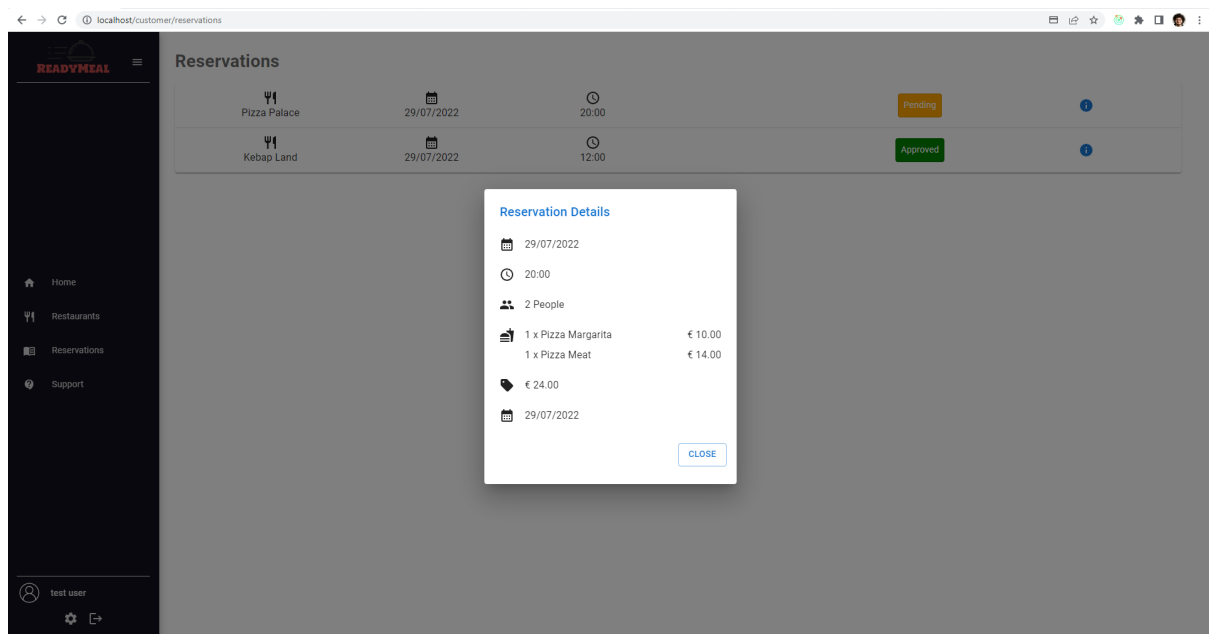

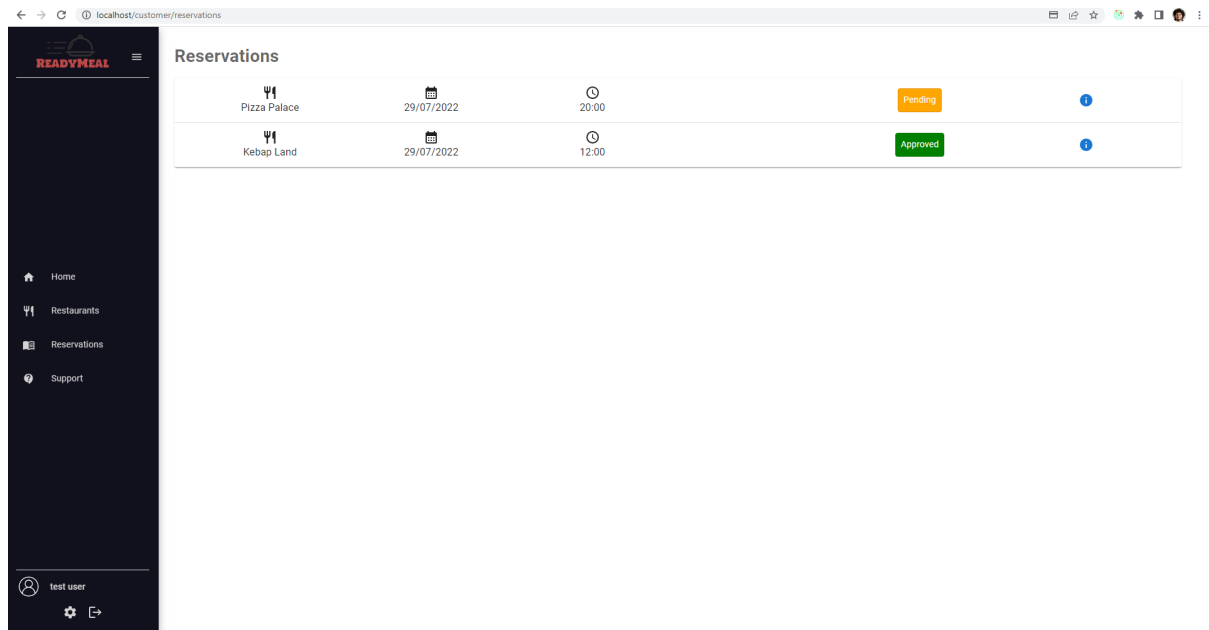

Use Case 2: Management of Reservations by Restaurant Customer

This is the use case where restaurant customers search for restaurants in a city and find a menu to reserve meals for a specific time. The use case handles the payment with stripe during the reservation phase. However, if it fails, the user can try paying again on the reservation page in case of a failure during payment.

There are missing parts in this use case such as the tag list and the dietary restriction for the restaurants and canceling a reservation from the user side. We couldn't implement them in time.

Use Case 3: Management of Reviews by Restaurant Customer

This is the use case where restaurant customers add reviews for the completed reservations on their home page or a reservation page for customers.

Use Case 4: Management of Reservations by Restaurant Owners

This is the use case where the restaurant owners approve, deny or cancel the reservations. During approval, a restaurant owner can select a table at that specified time for that reservation by checking the details of the reservation.
